

# International Journal of COMPUTER AND INFORMATION SCIENCES

Volume 10, 1981

*International Journal of Computer and Information Sciences* publishes (1) high-quality, definitive, original articles that have been appropriately reviewed by competent scientific workers, (2) reviews of recent developments in the field, and (3) tutorial and expository papers covering specific areas of interest to applications of computer and information sciences. The journal aims to provide a forum for researchers and students in the field and to expedite communication between them and other scientists interested in these applications. We assume that the journal will be read by those with a common interest in computer and information sciences but with diverse backgrounds, such as engineering, mathematics, statistics, physics, chemistry, management science, library science, biomedical science, and behavioral science. Emphasis is placed upon both theoretical and experimental work that is of deep conceptual significance. The scope of the journal includes: software engineering; systems programming; pattern recognition; picture processing; computer graphics; information retrieval; computer organization; language processing; automata theory; mathematical linguistics; computer control; data structure and access; management information systems; medical information processing.
